

Sistemas Recomendadores Híbridos

IIC 3633 - Sistemas Recomendadores

Denis Parra
Profesor Asistente, DCC, PUC Chile

Memo del Semestre

- **Tarea 1:** Deadline el Jueves 17 de Septiembre.
- **Lecturas en el semestre:** Ya fueron actualizadas en el sitio web del curso.
- **Proyecto Final:**
 - Entrega de abstract con a lo más 3 ideas el martes 22 de Septiembre, el 29 de septiembre se debe entregar propuesta final.

Lecturas Semana 2 (Evaluación)

- Aspectos débiles y críticos:
 - No contiene referencias a métodos de factorización matricial. Ref: Koren, Y., & Bell, R. (2011). Advances in collaborative filtering. In Recommender systems handbook (pp. 145-186). Springer US.
 - Métricas no son autoexplicativas. Especial crítica a cómo se describe métrica de diversity y novelty de Lathia (revisar el post de <http://jpsf1971.tumblr.com/> por detalles)
 - Cobertura del capítulo, muy general. Poca diferencia entre machine learning, data mining y RecSys.
- Aspectos positivos:
 - Descripción de las fuentes de información.
 - Algunos términos que suenan novedosos para algunos usuarios (lurkers, trust)
- Aspectos para discusión:
 - Privacidad, mención de "venta de bases de datos de usuarios".
 - Robustez del recomendador a ataques / Reproducibility / Finalidad del RecSys.
 - Falta investigación que permita identificar técnicas que fallan para no repetir errores.
 - Combinación de la métricas: Cuál importa más? cómo encontrar la mejor combinación?

Resumen de Comentarios en Blogs II

Lecturas Semana 3 (Métricas de Evaluación)

- Aún faltan bastantes! Las revisaremos la próxima clase.

TOC

En esta clase

1. Motivación
2. Clasificación General
3. Modelos de Hibridización
4. Ejemplos

Motivación

Diferentes métodos tienen distintas debilidades y fortalezas

- Filtrado Colaborativo es preciso, pero sufre de sparsity, cold start y new item problem
- Filtrado Basado en contenido no sufre tanto por sparsity y permite con facilidad para extraer features del contenido. Sin embargo, también sufre de "new user problem", es menos preciso de el F.C. y presenta sobre-especialización.
- Knowledge-based: No los hemos visto hasta ahora. Casos típicos son Constraint-Based y Case-Based. Basados en un paradigma más interactivo, también los llaman “Conversacionales” (Burke, 2002). Su principal debilidad es el costo de mantener las reglas actualizadas.

Categorización de RecSys de Burke (2002)

Table I: Recommendation Techniques

Technique	Background	Input	Process
Collaborative	Ratings from U of items in I .	Ratings from u of items in I .	Identify users in U similar to u , and extrapolate from their ratings of i .
Content-based	Features of items in I	u 's ratings of items in I	Generate a classifier that fits u 's rating behavior and use it on i .
Demographic	Demographic information about U and their ratings of items in I .	Demographic information about u .	Identify users that are demographically similar to u , and extrapolate from their ratings of i .
Utility-based	Features of items in I .	A utility function over items in I that describes u 's preferences.	Apply the function to the items and determine i 's rank.
Knowledge-based	Features of items in I . Knowledge of how these items meet a user's needs.	A description of u 's needs or interests.	Infer a match between i and u 's need.

Combinar Métodos Content-based y Filtrado Colaborativo

Según (Adomavicius et al., 2005)

- Implementar métodos CF y CB separadamente y combinar las predicciones
- Incorporar características de métodos CB dentro de un método CF
- Incorporar características colaborativas dentro de modelo CB
- Construir un modelo que de manera unificada incorpore características basadas en contenido y colaborativas

Ref: Adomavicius, G., & Tuzhilin, A. (2005). Toward the next generation of recommender systems: A survey of the state-of-the-art and possible extensions. *Knowledge and Data Engineering, IEEE Transactions on*, 17(6), 734-749.

Cómo combinar Métodos de Recomendación?

Burke (2002) distingue 7 estrategias de hibridización

Jannach (2012) resume las 7 estrategias en 3 diseños generales

- Monolítico
- Paralelizado
- Pipeline

7 Estrategias de Hibridización (Burke 2002)

Table III: Hybridization Methods

Hybridization method	Description
Weighted	The scores (or votes) of several recommendation techniques are combined together to produce a single recommendation.
Switching	The system switches between recommendation techniques depending on the current situation.
Mixed	Recommendations from several different recommenders are presented at the same time
Feature combination	Features from different recommendation data sources are thrown together into a single recommendation algorithm.
Cascade	One recommender refines the recommendations given by another.
Feature augmentation	Output from one technique is used as an input feature to another.
Meta-level	The model learned by one recommender is used as input to another.

Hibridización Monolítica

Table III: Hybridization Methods

Hybridization method	Description
Weighted	The scores (or votes) of several recommendation techniques are combined together to produce a single recommendation.
Switching	The system switches between recommendation techniques depending on the current situation.
Mixed	Recommendations from several different recommenders are presented at the same time.
Feature combination	Features from different recommenders are thrown together.
Cascade	One recommender feeds its output to another.
Feature augmentation	A recommender's features are augmented by another.
Meta-level	The model learned by one recommender is used as input to another.

Hibridización Paralela

Table III: Hybridization Methods

Hybridization method	Description
Weighted	The scores (or votes) of several recommendation techniques are combined together to produce a single recommendation.
Switching	The user's profile is used to switch between different recommendation techniques
Mixed	Recommendations from several different recommenders are presented at the same time
Feature combination	Features from different recommendation data sources are thrown together into a single recommendation algorithm.
Cascade	One recommender refines the recommendations given by another.
Feature augmentation	Output from one technique is used as an input feature to another.
Meta-level	The model learned by one recommender is used as input to another.

Parallel

Hibridización Pipeline

Table III: Hybridization Methods

Hybridization method	Description
Weighted	The scores (or votes) of several recommendation techniques are combined together to produce a single recommendation.
Switching	The system switches between recommendation techniques depending on the current situation.
Mixed	Recommendations from several different recommenders are presented at the same time
Feature combination	Features from different recommendation data sources are thrown into a single feature space.
Cascade	→ Pipeline → given by another.
Feature augmentation	Output from one technique is used as an input feature to another.
Meta-level	→ Pipeline → as input to

Hibridización Monolítica

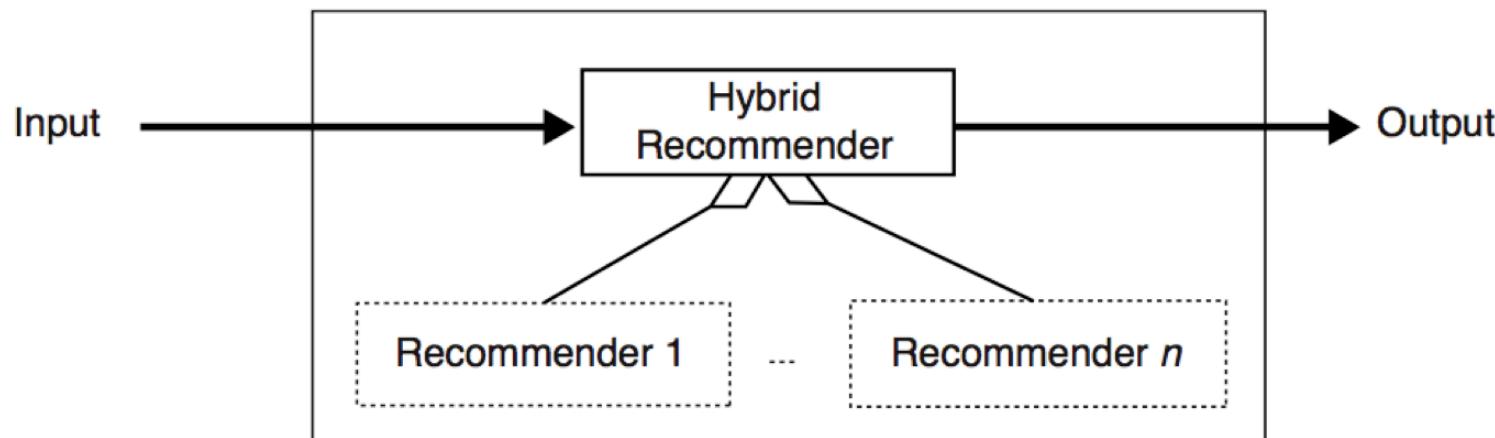

Figure 5.2. Monolithic hybridization design.

Estrategias de Combinación:

- Feature Combination
- Feature Augmentation

H. Monolítica: Feature Combination I

Table 5.3. *Hybrid input features.*

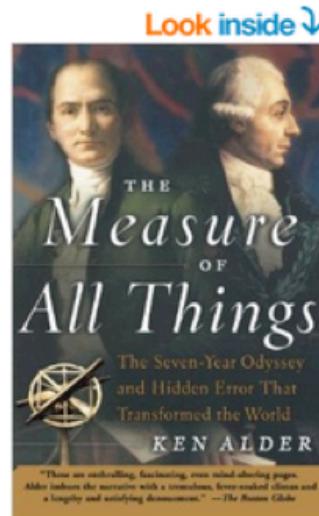

Feature	Alice	User1	User2	User3	User4
User likes many <i>mystery</i> books	true	true			
User likes some <i>mystery</i> books			true	true	
User likes many <i>romance</i> books					
User likes some <i>romance</i> books			true	true	
User likes many <i>fiction</i> books					
User likes some <i>fiction</i> books		true	true		true

H. Monolítica: Feature Combination II

Table 5.4. *Different types of user feedback.*

User	R_{nav}	R_{view}	R_{ctx}	R_{buy}
Alice	n_3, n_4	i_5	k_5	\emptyset
User1	n_1, n_5	i_3, i_5	k_5	i_1
User2	n_3, n_4	i_3, i_5, i_7	\emptyset	i_3
User3	n_2, n_3, n_4	i_2, i_4, i_5	k_2, k_4	i_4

H. Monolítica: Feature Augmentation

Usar estas “features” en un nuevo recomendador

Hibridización Paralela

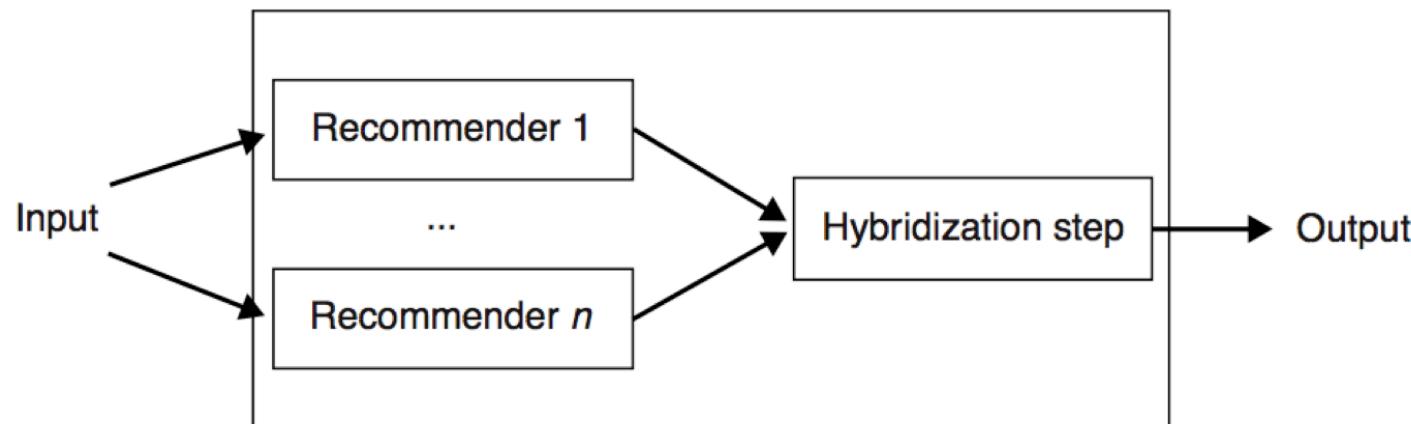

Figure 5.3. Parallelized hybridization design.

Tres mecanismos principales:

- Weighted
- Mixed
- Switching

H. Paralela: Weighted I

$$W_{rec_i} = \sum_{s_j \in S} (W_{rec_i, s_j} \cdot W_{s_j})$$

rec_i	Item recomendado i
W_{rec_i}	Score combinado del item i
W_{rec_i, s_j}	Score del item I por el recomendador S_j
W_{s_j}	Peso del recomendador S_j

H. Paralela: Weighted II

The screenshot shows the SecondLife Marketplace store interface. At the top, there are links for Language, Home, Help, What is Second Life?, Join Now, It's Free!, and Sign In. Below this is a search bar with fields for Items, Merchant/Stores, Search in (Animals, General), Show maturity levels, Keywords, and a Search button. A cart icon shows 6 items. The main area displays a search result for 'Animals' with 36535 matching items found. A message says 'You may be able to see more items after you log in or join Second Life.' Below this is a category filter for 'Animals' with sub-categories like Animal & Pet Supplies, Birds, Cats and Dogs, Horses, Insects, Linden Bears, Livestock, Marine Animals, Other Animals, Reptiles, Rodents, and Scripted Pets. A price filter shows ranges from L\$0 - L\$10 to Over L\$5,000. A prim count filter is also present. The 'Featured Items' section shows three items: 'Bloodhound II' (L\$4,800), 'Deer Family' (L\$350), and '[SYM] Mesh Nylon Harness for WereHouse Dire Wolf' (L\$150). Below this are two more items: 'BREEDABLE FOOD' (L\$189) and 'Fennux Dish of Kibbles' (L\$189).

(a) SecondLife store

The screenshot shows a user's social stream on the SecondLife social network. The profile of 'Sylvia Tamalyn' (sylvia.tamalyn) is displayed, with options to Add Friend, Follow, Message, and Settings. The stream has tabs for Feed, About, Picks, and Groups, with 'All' selected. The feed shows a post from 'dresden.ceriano' with a comment: "Are you wearing your fur coat again, Tem? :p" posted about 4 hours ago. Another post from 'sylvia.tamalyn' shows a snapshot of her in a field, with the caption "Might as well play with WL while I am here :D" and a location tag for Shermerville NW. This post has 3 likes and 20 comments. A comment from 'empressazy' says "love the imagery. man i am still workin with WL." and another from 'sylvia.tamalyn' says "Thank you :)" both posted about 11 hours ago. A text input field at the bottom says "Write a comment..."

(b) SecondLife social stream

Fig. 1. Examples for a store in the marketplace and a social stream of an user in the online social network of the virtual world SecondLife.

H. Paralela: Mixed I

$$src(rec_i) = \left[\sum_{m_m \in M} \frac{1}{rank_{rec_i, m_j}} \times W_{m_j} \right] \times |M_{rec_i}|$$

M : The set of all methods available to fuse

$rank_{rec_i, m_j}$: rank–position in the list of a recommended item

rec_i : recommended item i

m_j : recommendation method j

W_{m_j} : weight given by the user to the method m_j using the controllable interface

$|M_{rec_i}|$ represents the number of methods by which item rec_i was recommended

Slider

weight

by Werner Robitzka, Carl Lagoze, Bernhard Haslhofer, Keith Newman, Amanda Stefanik	
14. Effects of User Identity Information On Key Answer Outcomes in Social Q&A	[see abstract]
by Erik Choi, Craig Scott, Chirag Shah	
15. Ebooks and cross generational perceived privacy issues	[see abstract]
by Jennifer Sue Thiele, Renee Kapusniak	
16. Toward a mesoscopic analysis of the temporal evolution of scientific collaboration networks	

H. Paralela: Mixed IV

Sliders

Allow the user to control the importance of each data source or recommendation method

Interactive Venn Diagram

Allows the user to inspect and to filter papers recommended. Actions available:

- Filter item list by clicking on an area
- Highlight a paper by mouse-over on a circle
- Scroll to paper by clicking on a circle
- Indicate bookmarked papers

H. Paralela: Switching I

- De un grupo de recomendadores, **activar un recomendador a la vez**.
- Podría ser especialmente útil **considerando los learning rate de algunos métodos**.
- **Ejemplo:** Elegir entre un clasificador Bayesiano y un recomendador Item-based como en: Ghazanfar, M., & Prugel-Bennett, A. (2010). **An Improved Switching Hybrid Recommender System Using Naive Bayes Classifier and Collaborative Filtering**.

$$P(C_j|d) = \frac{P(C_j) \prod_{i=1}^h P(F_i|C_j)}{P(F_1, \dots, F_h)}.$$

H. Paralela: Switching II

Table 1: A comparison of proposed algorithm with existing in terms of cost (based on [31]), accuracy metrics, and coverage

Algorithm	On-line Cost	Best MAE		ROC-Sensitivity		Coverage	
		(ML)	(FT)	(ML)	(FT)	(ML)	(FT)
<i>UBCF_{DV}</i>	$O(M^2N) + O(NM)$	0.766	1.441	0.706	0.563	99.424	93.611
IBCF	$O(N^2)$	0.763	1.421	0.733	0.605	99.221	92.312
IDemo4	$O(N^2)$	0.749	1.407	0.739	0.621	99.541	94.435
<i>Rec_{NBCF}</i>	$O(N^2) + O(Mf)$	0.696	1.341	0.778	0.657	100	99.992
NB	$O(Mf)$	0.808	1.462	0.703	0.571	100	99.992
NH	$O(N^2) + O(Mf)$	0.785	1.438	0.712	0.586	100	99.992
CB	$O(M^2N) + O(NM) + O(Mf)$	0.721	1.378	0.741	0.611	100	99.995
